

Igor Stojanov

AI Engineer

stojanovi.vs@gmail.com | [linkedin.com/in/igor-stojanov-448a02203](https://www.linkedin.com/in/igor-stojanov-448a02203) | github.com/igor-stojanov | Belgrade, Serbia

AI Engineer with a strong backend and enterprise foundation (insurance platforms, SAP) and Web3 infrastructure experience, now designing and delivering AI solutions, including LLM-based and agentic systems, in an enterprise setting. Over 3 years building backend services in Python, TypeScript, C#, and Java across containerized, cloud-native environments (Docker, Kubernetes/OpenShift, AWS). Hands-on experience integrating LLMs into production systems, from AI-assisted text refinement to AI-driven data analysis in a Web3 platform, combined with AWS's Bedrock AgentCore certification and ongoing focus on RAG, prompt engineering, and agent orchestration.

KEY ACHIEVEMENTS

- Transitioned into a dedicated **AI Engineer** role at Generali, focused on enterprise LLM and agentic solutions.
- Designed and implemented two AI-powered features in a production Web3 data indexing platform: an LLM-assisted **"Refine Message"** tool for user-generated text, and an **AI-driven analysis system** that processes scraped contact data to recommend relevant connections to users.
- Completed AWS Skill Builder's **"Building Production-Ready AI Agents with Amazon Bedrock AgentCore"** course, covering agent design, orchestration, and deployment.
- Delivered the **PPI project** at Generali using TypeScript, and containerized/deployed enterprise applications with Docker, Kubernetes, and OpenShift, supported by CI/CD pipelines across GitLab, GitHub, Microsoft TFS, and Azure DevOps.
- Built and maintained REST and WebSocket APIs powering a large-scale Web3 indexer used across multiple client applications, on a serverless AWS stack (Lambda, API Gateway, SQS, RDS/PostgreSQL).
- Independently designed and deployed end-to-end projects, including a serverless task-management API and a Web3.js dApp for ERC-20 token transfers.

TECHNICAL STACK

Programming Languages: Python (FastAPI, OOP), TypeScript, JavaScript, C#, Java

AI & LLM: LLM API integration & prompt engineering (production use) · AWS Bedrock / AgentCore (certified) · RAG architecture, vector databases & semantic search (self-directed study) · Agent orchestration (self-directed study, applying on the job)

Cloud & DevOps: AWS (Lambda, API Gateway, SQS, RDS/PostgreSQL) · Docker · Kubernetes · OpenShift · CI/CD (GitLab, GitHub, Microsoft TFS, Azure DevOps) · Git · Alembic

Web Development: REST & WebSocket APIs · React.js · Web3.js

Databases: PostgreSQL · MySQL

Enterprise Tools: SAP Basis administration · Postman

EXPERIENCE

AI Engineer — Generali · August 2026 – Present

Recently transitioned into a dedicated AI Engineer role, focused on designing, implementing, and maintaining enterprise AI solutions — including LLM-based systems (RAG, prompt engineering) and agentic workflows — in collaboration with business stakeholders, the Data team, IT architecture, and Security. Responsible for defining technical approaches for AI initiatives, integrating AI components with internal applications and external services, and applying responsible-AI principles around data protection, access control, and auditability.

Digital Solutions Developer — Generali · April 2026 – July 2026

Contributed to backend logic for enterprise insurance applications using C# and Java, building and integrating REST APIs, and improving data-processing workflows and system performance. Containerized and deployed applications using Docker, Kubernetes, and OpenShift, supported by CI/CD pipelines (GitLab, GitHub, Microsoft TFS, Azure DevOps).

Backend & Web3 Developer — DcentraLab · *October 2025 – April 2026*

Designed and built backend services in Python for a high-throughput Web3 data indexing platform, including REST and WebSocket APIs consumed by multiple client applications. Introduced two AI-powered features into the product: an **LLM-assisted “Refine Message” tool** that helps users improve their written messages in real time, and an **AI-driven analysis system** that processes scraped contact data to recommend which stakeholders a user should reach out to. Worked across the AWS serverless stack (Lambda, API Gateway, SQS, RDS/PostgreSQL) to keep the platform scalable and cost-efficient.

Frontend Developer — Generali · *July 2023 – October 2025*

Developed frontend applications for travel insurance products and the PPI (Payment Protection Insurance) platform, using JavaScript, React, and TypeScript. Built and maintained user-facing features and worked closely with backend teams to integrate REST APIs into insurance workflows.

Junior SAP Basis Consultant — STADA GIS · *January 2022 – July 2023*

Administered SAP systems, monitoring performance and reliability, and resolving SAP GUI and system issues.

SAP Basis Consultant Intern — STADA GIS · *July 2021 – December 2021*

PROJECTS

Smart Task Manager API — Task management API with CRUD functionality and automated database migrations (Alembic), deployed on AWS using a serverless architecture for cost efficiency and scalability.

Token Sender – HORD Token — Decentralized app for sending ERC-20 tokens via Web3.js, with integrated MetaMask wallet connectivity and blockchain transaction handling.

EDUCATION

ITS – Information Technology School, Belgrade · 2018 – 2022

Gymnasium “Borislav Petrov Braca”, Vršac · 2014 – 2018

CERTIFICATES

- AWS Skill Builder: Building Production-Ready AI Agents with Amazon Bedrock AgentCore
- Udemy: The Complete Python Bootcamp From Zero to Hero in Python
- Udemy: React – The Complete Guide (incl Hooks, React Router, Redux)
- Celonis: Administer the EMS – Security, Permissions, Governance
